GENERAL INFORMATION:

APPLICANT: Sallberg, Matti

TITLE OF INVENTION: SYNTHETIC PEPTIDES THAT BIND TO THE

TITLE OF INVENTION: HEPATITIS B VIRUS CORE AND E ANTIGENS

FILE REFERENCE: TRIPPE. 020CP1

CURRENT APPLICATION NUMBER: US/09/839,447A

CURRENT FILING DATE: 2001-08-09

PRIOR APPLICATION NUMBER: 09/556605

PRIOR PELING DATE: 2000-04-21

NUMBER OF SEQ ID NOS: 111

SOFTWARE: FastSEQ for Windows Version 4.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        88.0%; Score 44; DB 10; Length 20; 88.9%; Pred. Nalternate names: carboxypeptidase III
C;Species: Hordeum vulgare (parley)
C;Date: 24-Nov-1999 #sequence_revision 24-Nov-1999 #text_change 24-Nov-1999
C;Accession: A35275
C;Accession: A35275; MUD:90315015; PMID:2639682
A;Title: Primary structure of carboxypeptidase III from malted barley.
A;Reference number: A35275; MUD:90315015; PMID:2639682
A;Reference number: A35275
A;Note: 185-Val was also found
C;Superfamily: serine carboxypeptidase
C;Keywords: blocked amino end; glycoprotein; hydrolase; serine carboxypeptidase
C;Keywords: blocked amino end; (Leu) (probably acetylated) #status experimental
F;17/Muding site: carbohydrate (Asn) (covalent) #status experimental
F;143,331,388/Active site: Ser, Asp, His #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          probable MFS transporter PA2114 [imported] - Pseudomonas aeruginosa (strain PAO1)
C:Species: Pseudomonas aeruginosa

FRINTIA 3.8. (C.1997) to the EMBL/GenBank/DDBJ databases.
Submitted (OCT-1997) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Blectron carrier protein. The oxidized form of the
cytochrome c heme group can accept an electron from the heme group
of the cytochrome c1 subunit of cytochrome reductase. Cytochrome of
then transfers this electron to the cytochrome oxidase complex,
the final protein carrier in the mitochondrial electron-transport
                                                                                                                                                                                                                                                                        Gaps
